

The objectives of the proposed project are reinforcement of research potential of DEMATEN and strengthening partnerships among centers of excellence established in the EU and the Western Balkan Countries (WBC). Thus, upgrading and renewal of S&T research equipment is one of the most important activities, which should be realized through WP 4.

The following deliverables would provide the information regarding the activities of WP 4 throughout the project:

- Tender documentation for equipment, (download PDF)
- Report - Selection of the best offer for equipment, (download PDF)
- Report - Equipment: purchase, installation, training.

The plan for the first Project year was completely realized – Malvern Zetasizer Nano ZS and Waters Gel Permeation Chromatograph were purchased and delivered to the Department of Materials Engineering, at Faculty of Technology, University of Novi Sad.
